PRIMROSES FROM SKY HOOK

PRIMULAS are perennials of easy culture for the partially shady areas of your garden. They are ideal for edging a path, as a low border or in a nook or ravine they will enhance your spring and early summer garden in a rainbow color range.

The primroses grown at Sky Hook have weathered two severe Vermont winters and have heavy and vigorous root development. The soil should be cultivated to a depth of eight to ten inches and enriched with humus and organic fertilizer. A summer mulch is beneficial to conserve moisture and to allow a cool root run.

All plants are dug to order, packed in plastic bags and shipped the same day to ensure freshness on arrival by parcel post special handling. Add 20% for shipping charges on orders under \$5.00. On orders from \$5.00 to \$10 add 10%. Orders from \$10.00 to \$15.00 add 5%. Orders over \$15.00 are postpaid.

Our liability in all cases is limited to replacement of plants not true to name or a refund of the original purchase price.
